PA3 Questions
Templated classes
Copy constructors
Operator overloading
mt19937 mt;
mt.seed( time(NULL) );
int iRandom = mt();
(almost)
Everything is an expression
a << b;
Without an overload, \texttt{<<} is the left shift operator, and works on ints.
But the use you’re more used to is the insertion operator...
... which is overloaded by `<iostream>` classes
Overloading an operator lets you decide what it does.
There are a bunch of overloadable operators.
new delete new[]
delete[]
